

# Wyoming Science Content and Performance Standards Correlation to PhD $Science^{TM}$

| Green indicates that <i>PhD Science</i> ™ fully addresses the standard within the grade level. |
|--|
| Blue indicates that <i>PhD Science</i> covers the standard but in a different grade level.     |
| Yellow indicates that <i>PhD Science</i> partially covers the standard within the grade level. |
| Red indicates that <i>PhD Science</i> does not cover the standard.                             |

Key: Module (M), Lesson (L)

## PhD Science Level 3

The Grade 3 Wyoming Science Content and Performance Standards are fully covered by the Level 3 *PhD Science* curriculum but some out of grade level. A detailed analysis of alignment appears in the table below.

| Grade 3 Performance Expectations |  |  | Aligned PhD        |
|----------------------------------|--|--|--------------------|
|                                  |  |  | Science Lessons    |
| Motion and                       | Stability: Forces and Interactions                                     |  |                    |
| 3-PS2-1                          | Plan and conduct an investigation to provide evidence of the effects   |  | Level 3 M4 L10-L18 |
|                                  | of balanced and unbalanced forces on the motion of an object.          |  | Level 3 M4 L28-L30 |
| 3-PS2-2                          | Make observations and/or measurements of an object's motion to         |  | Level 3 M4 L1-L9   |
|                                  | provide evidence that a pattern can be used to predict future motion.  |  | Level 3 M4 L28-L30 |
| 3-PS2-3                          | Ask questions to determine cause and effect relationships of electric  |  | Level 3 M4 L19-L21 |
|                                  | or magnetic interactions between two objects not in contact with       |  | Level 3 M4 L28-L30 |
|                                  | each other.  |  |                    |
| 3-PS2-4                          | Define a simple design problem that can be solved by applying          |  | Level 3 M4 L22-L30 |
|                                  | scientific ideas about magnets.  |  |                    |
| 3-LS1 From                       | Molecules to Organisms: Structures and Processes                       |  |                    |
| 3-LS1-1                          | Develop models to describe that organisms have unique and diverse      |  | Level 3 M3 L7-L8   |
|                                  | life cycles but all have in common birth, growth, reproduction, and    |  | Level 3 M3 L23-L28 |
|                                  | death.   |  |                    |
| 3-LS2 Ecosy                      | 3-LS2 Ecosystems: Interactions, Energy, and Dynamics                   |  |                    |
| 3-LS2-1                          | Construct an argument that some animals form groups that help          |  | Level 3 M2 L13-L15 |
|                                  | members survive.   |  | Level 3 M2 L26-L28 |
| 3-LS3 Hered                      | lity: Inheritance and Variation of Traits                              |  |                    |
| 3-LS3-1                          | Analyze and interpret data to provide evidence that plants and         |  | Level 3 M3 L1-L6   |
|                                  | animals have traits inherited from parents and that variation of these |  | Level 3 M3 L14-L18 |
|                                  | traits exists in a group of similar organisms.                         |  | Level 3 M3 L26-L28 |
| 3-LS3-2                          | Use evidence to support the explanation that observable traits can be  |  | Level 3 M3 L9-L13  |
|                                  | influenced by the environment.   |  | Level 3 M3 L19–L20 |
|                                  |  |  | Level 3 M3 L26-L28 |
| 3-LS4 Biolog                     | gical Evolution: Unity and Diversity                                   |  |                    |
| 3-LS4-1                          | Analyze and interpret data from fossils to provide evidence of the     |  | Level 3 M2 L1-L8   |
|                                  | organisms and the environments in which they lived long ago.           |  | Level 3 M2 L26-L28 |

| 3-LS4-2                         | Use evidence to construct an explanation for how the variations in    |  | Level 3 M3 L21–L28 |
|---------------------------------|---|--|--------------------|
|                                 | characteristics among individuals of the same species may provide     |  |                    |
|                                 | advantages in surviving, finding mates, and reproducing.              |  |                    |
| 3-LS4-3                         | Construct an argument with evidence that in a particular habitat      |  | Level 3 M2 L1–L2   |
|                                 | some organisms can survive well, some survive less well, and some     |  | Level 3 M2 L9-L12  |
|                                 | cannot survive at all.  |  | Level 3 M2 L16-L19 |
|                                 |   |  | Level 3 M2 L22–L28 |
| 3-LS4-4                         | Make a claim about the merit of a solution to a problem caused when   |  | Level 3 M2 L16-L28 |
|                                 | the environment changes and the types of plants and animals that      |  |                    |
|                                 | live there may change.  |  |                    |
| 3-ESS2 Earth'                   | s Systems   |  |                    |
| 3-ESS2-1                        | Represent data in tables and graphical displays to describe typical   |  | Level 3 M1 L1–L15  |
|                                 | weather conditions expected during a particular season.               |  | Level 3 M1 L19-L20 |
|                                 |   |  | Level 3 M1 L27–L29 |
| 3-ESS2-2                        | Obtain and combine information to describe climates in different      |  | Level 3 M1 L11–L15 |
|                                 | regions of the world.   |  | Level 3 M1 L27–L29 |
| 3-ESS3 Earth and Human Activity |   |  |                    |
| 3-ESS3-1                        | Make a claim about the merit of a design solution that reduces the    |  | Level 3 M1 L1–L3   |
|                                 | impacts of a weather-related hazard.                                  |  | Level 3 M1 L16-L29 |
| 3-5-ETS1 Eng                    | ineering, Technology, & Applications of Science                       |  |                    |
| 3-5-ETS1-1                      | Define a simple design problem reflecting a need or a want that       |  | Level 3 M1 L21–L26 |
|                                 | includes specified criteria for success and constraints on materials, |  | Level 3 M4 L23-L27 |
|                                 | time, or cost.  |  |                    |
| 3-5-ETS1-2                      | Generate and compare multiple possible solutions to a problem         |  | Level 4 M1 L12-L17 |
|                                 | based on how well each is likely to meet the criteria and constraints |  | Level 5 M3 L19-L23 |
|                                 | of the problem.   |  |                    |
| 3-5-ETS1-3                      | Plan and carry out fair tests in which variables are controlled and   |  | Level 3 M2 L23-L27 |
|                                 | failure points are considered to identify aspects of a model or       |  | Level 3 M4 L23-L27 |
|                                 | prototype that can be improved.                                       |  |                    |
|                                 |   |  |                    |

|   | <ul> <li>Construct an argument with evidence, data, and/or a model.</li> </ul>              | Level 3 M2 L9–L15  |
|   | Construct an argument with evidence.  | Level 3 M2 L20-L21 |
|   | Make a claim about the merit of a solution to a problem by citing relevant                  | Level 3 M3 L16-L20 |
|   | evidence about how it meets the criteria and constraints of the problem.                    | Level 3 M4 L10-L14 |
| 8 | Obtaining, Evaluating, and Communicating Information  | Level 3 M1 L16-L17 |
|   | Obtain and combine information from books and other reliable media to                       | Level 3 M2 L13-L15 |
|   | explain phenomena.  | Level 3 M2 L20–L21 |
|   |   | Level 3 M4 L22     |
| Щ |   | _ =====            |

| Disciplinary | Disciplinary Core Ideas   |  |  |  |
|--------------|---|--|--|--|
| PS2.A        | Forces and Motion   |  |  |  |
|              | Each force acts on one particular object and has both strength and a direction. An object at rest typically has multiple forces acting on it, but they add to give zero net force on the object. Forces that do not sum to zero can cause changes in the object's speed or direction of motion. |  | Level 3 M4 L10–L18<br>Level 3 M4 L28–L30 |  |
|              | The patterns of an object's motion in various situations can be observed and measured; when that past motion exhibits a regular pattern, future motion can be predicted from it.  |  | Level 3 M4 L1–L9<br>Level 3 M4 L28–L30   |  |

| PS2.B | Type of Interactions   | -                  |
|-------|--|--------------------|
|       | Objects in contact exert forces on each other.                       | Level 3 M4 L10–L18 |
|       |  | Level 3 M4 L28–L30 |
|       | Electric and magnetic forces between a pair of objects do not        | Level 3 M4 L19-L30 |
|       | require that the objects be in contact. The sizes of the forces in   |                    |
|       | each situation depend on the properties of the objects and their     |                    |
|       | distances apart and, for forces between two magnets, on their        |                    |
|       | orientation relative to each other.                                  |                    |
| LS1.B | Growth and Development of Organisms                                  |                    |
|       | Reproduction is essential to the continued existence of every kind   | Level 3 M3 L7–L8   |
|       | of organism.   | Level 3 M3 L23–L28 |
|       | Plants and animals have unique and diverse life cycles.              | Level 3 M3 L7–L8   |
|       |  | Level 3 M3 L23–L28 |
| LS2.C | Ecosystem Dynamics, Functioning, and Resilience                      |                    |
|       | When the environment changes in ways that affect a place's           | Level 3 M2 L16–L28 |
|       | physical characteristics, temperature, or availability of resources, |                    |
|       | some organisms survive and reproduce, others move to new             |                    |
|       | locations, yet others move into the transformed environment, and     |                    |
|       | some die.  |                    |
| LS2.D | Social Interactions and Group Behavior                               |                    |
|       | Being part of a group helps animals obtain food, defend              | Level 3 M2 L13–L15 |
|       | themselves, and cope with changes.                                   | Level 3 M2 L22–L28 |
|       | Groups may serve different functions and vary dramatically in size.  | Level 3 M2 L13–L15 |
|       |  | Level 3 M2 L22–L28 |
| LS3.A | Inheritance of Traits  |                    |
|       | Many characteristics of organisms are inherited from their           | Level 3 M3 L14–L18 |
|       | parents.   | Level 3 M3 L26–L28 |
|       | Other characteristics result from individuals' interactions with the | Level 3 M3 L9–L13  |
|       | environment, which can range from diet to learning. Many             | Level 3 M3 L19–L20 |
|       | characteristics involve both inheritance and environment.            | Level 3 M3 L26–L28 |
| LS3.B | Variation of Traits  |                    |
|       | Different organisms vary in how they look and function because       | Level 3 M3 L1–L6   |
|       | they have different inherited information.                           | Level 3 M3 L14–L18 |
|       |  | Level 3 M3 L23–L28 |
|       | The environment also affects the traits that an organism develops.   | Level 3 M3 L9–L13  |
|       |  | Level 3 M3 L19–L20 |
|       |  | Level 3 M3 L26–L28 |
| LS4.A | Evidence of Common Ancestry and Diversity                            |                    |
|       | Some kinds of plants and animals that once lived on Earth are no     | Level 3 M2 L6–L8   |
|       | longer found anywhere.   | Level 3 M2 L26–L28 |
|       | Fossils provide evidence about the types of organisms that lived     | Level 3 M2 L1–L5   |
|       | long ago and also about the nature of their environments.            | Level 3 M2 L26–L28 |
| LS4.B | Natural Selection  |                    |
|       | Sometimes the differences in characteristics between individuals     | Level 3 M3 L21–L28 |
|       | of the same species provide advantages in surviving, finding         |                    |
|       | mates, and reproducing.  |                    |
| LS4.C | Adaptation   |                    |
|       | For any particular environment, some kinds of organisms survive      | Level 3 M2 L1–L2   |
|       | well, some survive less well, and some cannot survive at all.        | Level 3 M2 L9–L12  |
|       |  | Level 3 M2 L16–L19 |

|        |  |     | Level 3 M2 L22–L28 |
|--------|--|-----|--------------------|
| LS4.C  | Biodiversity and Humans  |     |                    |
|        | Populations live in a variety of habitats, and change in those       |     | Level 3 M2 L16–L21 |
|        | habitats affects the organisms living there.                         |     | Level 3 M2 L26-L28 |
| ESS2.D | Weather and Climate  |     |                    |
|        | Scientists record patterns of the weather across different times     |     | Level 3 M1 L1–L15  |
|        | and areas so that they can make predictions about what kind of       |     | Level 3 M1 L19–L20 |
|        | weather might happen next.   |     | Level 3 M1 L27–L29 |
|        | Climate describes a range of an area's typical weather conditions    |     | Level 3 M1 L11–L15 |
|        | and the extent to which those conditions vary over years.            |     | Level 3 M1 L27–L29 |
| ESS3.B | Natural Hazards  |     |                    |
|        | A variety of natural hazards result from natural processes.          |     | Level 3 M1 L1–L3   |
|        |  |     | Level 3 M1 L16–L29 |
|        | Humans cannot eliminate natural hazards but can take steps to        |     | Level 3 M1 L1–L3   |
|        | reduce their impacts.  |     | Level 3 M1 L16-L29 |
| ETS1.A | Defining Engineering Problems  |     |                    |
|        | Possible solutions to a problem are limited by available materials   |     | Level 3 M1 L21–L26 |
|        | and resources (constraints). The success of a designed solution is   |     |                    |
|        | determined by considering the desired features of a solution         |     |                    |
|        | (criteria). Different proposals for solutions can be compared on     |     |                    |
|        | the basis of how well each one meets the specified criteria for      |     |                    |
|        | success or how well each takes the constraints into account.         |     |                    |
| ETS1.B | Developing Possible Solutions  |     |                    |
|        | Research on a problem should be carried out before beginning to      |     | Level 3 M1 L21–L26 |
|        | design a solution. Testing a solution involves investigating how     |     |                    |
|        | well it performs under a range of likely conditions.                 |     |                    |
|        | At whatever stage, communicating with peers about proposed           |     | Level 3 M2 L23-L27 |
|        | solutions is an important part of the design process, and shared     |     |                    |
|        | ideas can lead to improved designs.                                  |     |                    |
|        | Tests are often designed to identify failure points or difficulties, |     | Level 3 M4 L23-L27 |
|        | which suggest the elements of the design that need to be             |     |                    |
|        | improved.  |     |                    |
| ETS1.C | Optimizing the Design Solution                                       |     |                    |
|        | Different solutions need to be tested in order to determine which    |     | Level 3 M4 L23-L27 |
|        | of them best solves the problem, given the criteria and the          |     |                    |
|        | constraints.   |     |                    |
| ETS2.A | Interdependence of Science, Engineering, and Technology              |     |                    |
|        | Scientific discoveries about the natural world can often lead to     |     | Level 3 M4 L23–L27 |
|        | new and improved technologies, which are developed through the       |     |                    |
|        | engineering design process.  |     |                    |
| ETS2.B | Influence of Science, Engineering, and Technology, on Society and    | the | Natural World      |
|        | People's needs and wants change over time, as do their demands       |     | Level 3 M1 L21–L26 |
|        | for new and improved technologies.                                   |     |                    |
|        | Scientific discoveries about the natural world can often lead to     |     | Level 3 M4 L23–L27 |
|        | new and improved technologies, which are developed through the       |     |                    |
|        | engineering design process.  |     |                    |
|        | Engineers improve existing technologies or develop new ones to       |     | Level 3 M1 L21–L26 |
|        | increase their benefits, decrease known risks, and meet societal     |     | Level 3 M4 L22–L27 |
|        | demands.   |     |                    |
|        |  |     |                    |

# Wyoming Science Content and Performance Standards Correlation to PhD $Science^{TM}$

| Green indicates that <i>PhD Science</i> ™ fully addresses the standard within the grade level. |
|--|
| Blue indicates that <i>PhD Science</i> covers the standard but in a different grade level.     |
| Yellow indicates that <i>PhD Science</i> partially covers the standard within the grade level. |
| Red indicates that <i>PhD Science</i> does not cover the standard.                             |

Key: Module (M), Lesson (L)

## PhD Science Level 4

The Grade 4 Wyoming Science Content and Performance Standards are fully covered by the Level 4 *PhD Science* curriculum but some out of grade level. A detailed analysis of alignment appears in the table below.

| Grade 4 Pe  | rformance Expectations  | Aligned PhD        |
|-------------|---|--------------------|
|             |   | Science Lessons    |
| 4-PS3 Ener  | gy  |                    |
| 4-PS3-1     | Use evidence to construct an explanation relating the speed of an         | Level 4 M2 L6–L7   |
|             | object to the energy of that object.                                      | Level 4 M2 L24–L26 |
| 4-PS3-2     | Make observations to provide evidence that energy can be                  | Level 4 M2 L1–L5   |
|             | transferred from place to place by sound, light, heat, and electric       | Level 4 M2 L10–L11 |
|             | currents.   | Level 4 M2 L24–L26 |
| 4-PS3-3     | Ask questions and predict outcomes about the changes in energy that       | Level 4 M2 L8-L9   |
|             | occur when objects collide.   | Level 4 M2 L24–L26 |
| 4-PS3-4     | Apply scientific ideas to design, test, and refine a device that converts | Level 4 M2 L12-L26 |
|             | energy from one form to another.  |                    |
| 4-PS4 Wav   | es and Their Applications in Technologies for Information Transfer        |                    |
| 4-PS4-1     | Develop a model of waves to describe patterns in terms of amplitude       | Level 4 M3 L7-L14  |
|             | and wavelength and that waves can cause objects to move.                  | Level 4 M3 L29-L31 |
| 4-PS4-2     | Develop a model to describe that light reflecting from objects and        | Level 4 M4 L1–L13  |
|             | entering the eye allows objects to be seen.                               | Level 4 M4 L20–L26 |
| 4-PS4-3     | Generate and compare multiple solutions that use patterns to              | Level 4 M4 L14-L19 |
|             | transfer information.   | Level 4 M4 L24–L26 |
| 4-LS1 From  | Molecules to Organisms: Structures and Processes                          |                    |
| 4-LS1-1     | Construct an argument that plants and animals have internal and           | Level 4 M3 L1–L6   |
|             | external structures that function to support survival, growth,            | Level 4 M3 L20     |
|             | behavior, and reproduction.   | Level 4 M3 L26-L31 |
| 4-LS1-2     | Use a model to describe that animals receive different types of           | Level 4 M3 L1-L6   |
|             | information through their senses, process the information in their        | Level 4 M3 L15-L25 |
|             | brain, and respond to the information in different ways.                  | Level 4 M3 L29-L31 |
| 4-ESS1 Eart | h's Place in the Universe   |                    |
| 4-ESS1-1    | Identify evidence from patterns in rock formations and fossils in rock    | Level 4 M1 L1–L5   |
|             | layers to support an explanation for changes in a landscape over time.    | Level 4 M1 L19–L20 |

|               |   | Level 4 M1 L25–L27   |
|---------------|---|--|
| 4-ESS2 Earth' | s Systems   |  |
| 4-ESS2-1      | Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation.                   | Level 4 M1 L6–L11<br>Level 4 M1 L25–L27                        |

| Disciplin | ary Core Ideas   | Aligned PhD        |
|-----------|--|--------------------|
|           |  | Science Lessons    |
| PS3.A     | Definitions of Energy  |                    |
|           | The faster a given object is moving, the more energy it possesses.       | Level 4 M2 L6-L9   |
|           |  | Level 4 M2 L12–L16 |
|           |  | Level 4 M2 L24–L26 |
|           | Energy can be moved from place to place by moving objects or through     | Level 4 M2 L1–L3   |
|           | sound, light, or electric currents.                                      | Level 4 M2 L10–L11 |
|           |  | Level 4 M2 L15–L16 |
|           |  | Level 4 M2 L24-L26 |
| PS3.B     | Conservation of Energy and Energy Transfer                               |                    |
|           | Energy is present whenever there are moving objects, sound, light, or    | Level 4 M2 L1–L5   |
|           | heat.  | Level 4 M2 L8–L9   |
|           |  | Level 4 M2 L24–L26 |
|           | When objects collide, energy can be transferred from one object to       | Level 4 M2 L1–L5   |
|           | another, thereby changing their motion.                                  | Level 4 M2 L8–L9   |
|           |  | Level 4 M2 L24–L26 |
|           | In such collisions, some energy is typically also transferred to the     | Level 4 M2 L1–L5   |
|           | surrounding air; as a result, the air gets heated and sound is produced. | Level 4 M2 L8–L9   |
|           |  | Level 4 M2 L24-L26 |
|           | Light also transfers energy from place to place.                         | Level 4 M2 L10-L11 |
|           |  | Level 4 M2 L24–L26 |
|           | Energy can also be transferred from place to place by electric currents, | Level 4 M2 L1–L3   |
|           | which can then be used locally to produce motion, sound, heat, or light. | Level 4 M2 L10-L26 |

|          | The currents may have been produced to begin with by transforming        | Level 4 M2 L1-L3   |
|----------|--|--------------------|
|          | the energy of motion into electrical energy.                             | Level 4 M2 L10-L26 |
| PS3.C    | Relationship between Energy and Forces                                   |                    |
|          | When objects collide, the contact forces transfer energy so as to change | Level 4 M2 L8-L9   |
|          | the objects' motions.  | Level 4 M2 L24-L26 |
| PS3.D    | Energy in Chemical Processes and Everyday Life                           |                    |
|          | The expression "produce energy" typically refers to the conversion of    | Level 4 M2 L12-L14 |
|          | stored energy into a desired form for practical use.                     | Level 4 M2 L24-L26 |
| PS4.A    | Wave Properties  |                    |
|          | Waves, which are regular patterns of motion, can be made in water by     | Level 4 M3 L7-L11  |
|          | disturbing the surface.  |                    |
|          | When waves move across the surface of deep water, the water goes up      | Level 4 M3 L7-L11  |
|          | and down in place; there is no net motion in the direction of the wave   |                    |
|          | except when the water meets the beach.                                   |                    |
|          | Waves of the same type can differ in amplitude (height of the wave) and  | Level 4 M3 L7-L11  |
|          | wavelength (spacing between wave peaks).                                 | Level 4 M3 L29-L31 |
| PS4.B    | Electromagnetic Radiation  |                    |
|          | An object can be seen when light reflected from its surface enters the   | Level 4 M4 L1–L13  |
|          | eyes.  | Level 4 M4 L20-L26 |
| PS4.C    | Information Technologies and Instrumentation                             |                    |
|          | Digitized information can be transmitted over long distances without     | Level 4 M4 L14-L19 |
|          | significant degradation.   | Level 4 M4 L24-L26 |
|          | High-tech devices, such as computers or cell phones, can receive and     | Level 4 M4 L14-L19 |
|          | decode information—convert it from digitized form to voice—and vice      | Level 4 M4 L24-L26 |
|          | versa.   |                    |
| LS1.A    | Structure and Function   |                    |
|          | Plants and animals have both internal and external structures that serve | Level 4 M3 L1-L6   |
|          | various functions in growth, survival, behavior, and reproduction.       | Level 4 M3 L20     |
|          |  | Level 4 M3 L26-L31 |
| LS1.D    | Information Processing   |                    |
|          | Different sense receptors are specialized for particular kinds of        | Level 4 M3 L1–L6   |
|          | information, which may be then processed by the animal's brain.          | Level 4 M3 L15–L25 |
|          |  | Level 4 M3 L29-L31 |
|          |  | Level 4 M4 L10–L13 |

|          | actions.   | Level 4 M3 L15–L25 |
|          |  | Level 4 M3 L29–L31 |
|          |  | Level 4 M4 L10–L13 |
| ESS1.C   | The History of Planet Earth  |                    |
|          | Local, regional, and global patterns of rock formations reveal changes   | Level 4 M1 L1–L5   |
|          | over time due to Earth's forces, such as earthquakes.                    | Level 4 M1 L19–L20 |
|          |  | Level 4 M1 L25–L27 |
|          | The presence and location of certain fossil types indicate the order in  | Level 4 M1 L1–L5   |
|          | which rock layers were formed.   | Level 4 M1 L19–L20 |
|          |  | Level 4 M1 L25–L27 |
| ESS2.A   | Earth Materials and Systems  |                    |
|          | Rainfall helps to shape the land and affects the types of living things  | Level 4 M1 L6–L11  |
|          | found in a region. Water, ice, wind, living organisms, and gravity break | Level 4 M1 L25–L27 |
|          | rocks, soils, and sediments into smaller particles and move them         |                    |
| <u> </u> | around.  |                    |

| ESS2.B | Plate Tectonics and Large-Scale System Interactions                        |     |                    |
|--------|--|-----|--------------------|
|        | The locations of mountain ranges, deep ocean trenches, ocean floor         |     | Level 4 M1 L18-L20 |
|        | structures, earthquakes, and volcanoes occur in patterns.                  |     | Level 4 M1 L25–L27 |
|        | Most earthquakes and volcanoes occur in bands that are often along the     |     | Level 4 M1 L18-L20 |
|        | boundaries between continents and oceans.                                  |     | Level 4 M1 L25–L27 |
|        | Major mountain chains form inside continents or near their edges.          |     | Level 4 M1 L18-L20 |
|        |  |     | Level 4 M1 L25–L27 |
|        | Maps can help locate the different land and water features areas of        |     | Level 4 M1 L18-L20 |
|        | Earth.   |     | Level 4 M1 L25-L27 |
| ESS3.A | Natural Resources  |     |                    |
|        | Energy and fuels that humans use are derived from natural sources, and     |     | Level 4 M1 L21–L27 |
|        | their use affects the environment in multiple ways.                        |     |                    |
|        | Some resources are renewable over time, and others are not.                |     | Level 4 M1 L21–L27 |
| ESS3.B | Natural Hazards  |     |                    |
|        | A variety of hazards result from natural processes (e.g., earthquakes,     |     | Level 4 M1 L12–L17 |
|        | tsunamis, volcanic eruptions).   |     | Level 4 M1 L25–L27 |
|        | Humans cannot eliminate the hazards but can take steps to reduce their     |     | Level 4 M1 L12–L17 |
|        | impacts.   |     | Level 4 M1 L25–L27 |
| ETS1.A | Defining and Delimiting Engineering Problems                               |     |                    |
|        | Possible solutions to a problem are limited by available materials and     |     | Level 4 M2 L17–L26 |
|        | resources (constraints).   |     |                    |
|        | The success of a designed solution is determined by considering the        |     | Level 4 M2 L17–L26 |
|        | desired features of a solution (criteria).                                 |     |                    |
|        | Different proposals for solutions can be compared on the basis of how      |     | Level 4 M2 L17–L26 |
|        | well each one meets the specified criteria for success or how well each    |     |                    |
|        | takes the constraints into account.  |     |                    |
| ETS1.B | Developing Possible Solutions  |     |                    |
|        | Research on a problem should be carried out before beginning to design     |     | Level 4 M1 L12–L17 |
|        | a solution. Testing a solution involves investigating how well it performs |     | Level 4 M4 L20–L23 |
|        | under a range of likely conditions.  |     |                    |
|        | At whatever stage, communicating with peers about proposed solutions       |     | Level 4 M1 L12–L17 |
|        | is an important part of the design process, and shared ideas can lead to   |     | Level 4 M4 L20–L23 |
|        | improved designs.  |     |                    |
|        | Tests are often designed to identify failure points or difficulties, which |     | Level 4 M1 L12–L17 |
|        | suggest the elements of the design that need to be improved.               |     | Level 4 M4 L20–L23 |
|        | Testing a solution involves investigating how well it performs under a     |     | Level 4 M4 L12–L17 |
|        | range of likely conditions.  |     | Level 4 M4 L20–L23 |
| ETS1.C | Optimizing the Design Solution   |     |                    |
|        | Different solutions need to be tested in order to determine which of       |     | Level 4 M1 L12–L17 |
|        | them best solves the problem, given the criteria and the constraints.      |     | Level 4 M4 L20–L23 |
| ETS2.B | Influence of Engineering, Technology, and Science on Society and the Na    | tur | al World           |
|        | Engineers improve existing technologies or develop new ones.               |     | Level 4 M1 L12–L17 |
|        |  |     | Level 4 M1 L23–L24 |
|        |  |     | Level 4 M2 L15–L23 |
|        | Engineers improve existing technologies or develop new ones to             |     | Level 4 M1 L12–L17 |
|        | increase their benefits, decrease known risks, and meet societal           |     | Level 4 M1 L23–L24 |
|        | demands.   |     | Level 4 M2 L15–L23 |
|        | People's needs and wants change over time, as do their demands for         |     | Level 4 M1 L12–L17 |
|        | new and improved technologies.   |     | Level 4 M1 L23–L24 |

# Wyoming Science Content and Performance Standards Correlation to PhD $Science^{TM}$

| Green indicates that <i>PhD Science</i> ™ fully addresses the standard within the grade level. |
|--|
| Blue indicates that <i>PhD Science</i> covers the standard but in a different grade level.     |
| Yellow indicates that <i>PhD Science</i> partially covers the standard within the grade level. |
| Red indicates that <i>PhD Science</i> does not cover the standard.                             |

Key: Module (M), Lesson (L)

## PhD Science Level 5

The Grade 5 Wyoming Science Content and Performance Standards are fully covered by the Level 5 *PhD Science* curriculum. A detailed analysis of alignment appears in the table below.

| Grade 5 Perf | ormance Expectations   |  | Aligned PhD        |
|--------------|--|--|--------------------|
|              |  |  | Science Lessons    |
| 5-PS1 Matte  | r and Its Interactions   |  |                    |
| 5-PS1-1      | Develop a model to describe that matter is made of particles too     |  | Level 5 M1 L5-L10  |
|              | small to be seen.  |  | Level 5 M1 L23-L26 |
| 5-PS1-2      | Measure and graph quantities to provide evidence that regardless of  |  | Level 5 M1 L9-L17  |
|              | the type of change that occurs when heating, cooling, or mixing      |  | Level 5 M1 L23-L26 |
|              | substances, the total weight of matter is conserved.                 |  |                    |
| 5-PS1-3      | Make observations and measurements to identify materials based on    |  | Level 5 M1 L1–L4   |
|              | their properties.  |  | Level 5 M1 L11–L17 |
|              |  |  | Level 5 M1 L23-L26 |
| 5-PS1-4      | Conduct an investigation to determine whether the mixing of two or   |  | Level 5 M1 L1–L2   |
|              | more substances results in new substances.                           |  | Level 5 M1 L13-L26 |
| 5-PS2 Motio  | 5-PS2 Motion and Stability: Forces and Interactions                  |  |                    |
| 5-PS2-1      | Support an argument that the gravitational force exerted by Earth on |  | Level 5 M4 L3-L4   |
|              | objects is directed down.  |  | Level 5 M4 L24–L26 |
| 5-PS3 Energy | 1  |  |                    |
| 5-PS3-1      | Use models to describe that energy in animals' food (used for body   |  | Level 5 M2 L15-L19 |
|              | repair, growth, motion, and to maintain body warmth) was once        |  | Level 5 M2 L24–L26 |
|              | energy from the sun.   |  |                    |
| 5-LS1 From N | Molecules to Organisms: Structures and Processes                     |  |                    |
| 5-LS1-1      | Support an argument that plants get the materials they need for      |  | Level 5 M2 L3–L5   |
|              | growth chiefly from air and water.                                   |  | Level 5 M2 L20-L26 |
| 5-LS2 Ecosys | tems: Interactions, Energy, and Dynamics                             |  |                    |
| 5-LS2-1      | Develop a model to describe the movement of matter among plants,     |  | Level 5 M2 L1–L2   |
|              | animals, decomposers, and the environment.                           |  | Level 5 M2 L6-L14  |
|              |  |  | Level 5 M2 L24–L26 |

| 5-ESS1 Earth'                   | 5-ESS1 Earth's Place in the Universe   |  |   |  |
|---------------------------------|--|--|---|--|
| 5-ESS1-1                        | Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from Earth.  |  | Level 5 M4 L18–L19<br>Level 5 M4 L24–L26                        |  |
| 5-ESS1-2                        | Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.                |  | Level 5 M4 L1–L2<br>Level 5 M4 L5–L17<br>Level 5 M4 L20–L26     |  |
| 5-ESS2 Earth'                   | s Systems  |  |   |  |
| 5-ESS2-1                        | Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact.   |  | Level 5 M3 L1–L3<br>Level 5 M3 L6–L13<br>Level 5 M3 L19–L27     |  |
| 5-ESS2-2                        | Describe and graph the amounts and percentages of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.                                       |  | Level 5 M3 L4–L5<br>Level 5 M3 L19–L27                          |  |
| 5-ESS3 Earth and Human Activity |  |  |   |  |
| 5-ESS3-1                        | Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environment.   |  | Level 5 M3 L14–L18<br>Level 5 M3 L24–L27                        |  |
| 3-5 Engineer                    | ing, Technology, & Applications of Science   |  |   |  |
| 3-5-ETS1-1                      | Define a simple design problem that can be solved through the development of an object, tool, process, or system and includes severak criteria for success and constraints on material, time, or cost. |  | Level 3 M1 L21– L26<br>Level 3 M4 L23–L27<br>Level 4 M2 L17–L23 |  |
| 3–5-ETS1-2                      | Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.  |  | Level 5 M3 L19–L23  |  |
| 3–5-ETS1-3                      | Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.                                    |  | Level 5 M1 L18–L22  |  |

|         | help protect Earth's resources and environments.                           |   |                        |

| ETS1.A | Defining and Delimiting Engineering Problems                               |                    |
|--------|--|--------------------|
|        | Possible solutions to a problem are limited by available materials and     | Level 5 M2 L21-L23 |
|        | resources (constraints). The success of a designed solution is             |                    |
|        | determined by considering the desired features of a solution (criteria).   |                    |
|        | Different proposals for solutions can be compared on the basis of how      |                    |
|        | well each one meets the specified criteria for success or how well each    |                    |
|        | takes the constraints into account.  |                    |
| ETS1.B | Developing Possible Solutions  |                    |
|        | Research on a problem should be carried out before beginning to design     | Level 5 M3 L18-L22 |
|        | a solution. Testing a solution involves investigating how well it performs |                    |
|        | under a range of likely conditions.  |                    |
|        | At whatever stage, communicating with peers about proposed solutions       | Level 5 M2 L21-L23 |
|        | is an important part of the design process, and shared ideas can lead to   | Level 5 M3 L19-L23 |
|        | improved designs.  |                    |
|        | Tests are often designed to identify failure points or difficulties, which | Level 5 M1 L19-L23 |
|        | suggest the elements of the design that need to be improved.               |                    |
| ETS1.C | Optimizing the Design Solution   |                    |
|        | Different solutions need to be tested in order to determine which of       | Level 5 M1 L18-L22 |
|        | them best solves the problem, given the criteria and the constraints.      |                    |
| ETS2.B | Influence of Science, Engineering, and Technology on Society and the       |                    |
|        | Natural World  |                    |
|        | People's needs and wants change over time, as do their demands for         | Level 5 M3 L19-L23 |
|        | new and improved technologies.   |                    |
|        | Engineers improve existing technologies or develop new ones to             | Level 5 M3 L19–L23 |
|        | increase their benefits, decrease known risks, and meet societal demands.  |                    |

| Basic laws of nature are the same everywhere in the universe.   |  |                    |
| Science Is a Way of Knowing   |  | Level 5 M3 L6-L8   |
| • Science is both a body of knowledge and processes that add new knowledge.                                   |  | Level 5 M4 L7–L8   |

| Science is a way of knowing that is used by many people.                      |                    |
|---|--------------------|
| Scientific Knowledge is Open to Revision in Light of New Evidence             | Level 5 M4 L14-L15 |
| Science explanations can change based on new evidence.                        |                    |
| Science Models, Laws, Mechanisms, and Theories Explain Natural Phenomena      | Level 5 M4 L1–L2   |
| Science theories are based on a body of evidence and many tests.              | Level 5 M4 L7–L8   |
| Science explanations describe the mechanisms for natural events.              | Level 5 M4 L13     |
| Science Addresses Questions About the Natural and Material World              | Level 5 M3 L10-L11 |
| Science findings are limited to what can be answered with empirical evidence. | Level 5 M4 L5-L6   |

| Connections to Engineering, Technology, and Applications of Science                | Aligned PhD        |
|--|--------------------|
|  | Science Lessons    |
| Influence of Engineering, Technology, and Science on Society and the Natural World | Level 5 M3 L19–L23 |
| People's needs and wants change over time, as do their demands for new and         |                    |
| improved technologies.   |                    |
| Engineers improve existing technologies or develop new ones to increase their      |                    |
| benefits, decrease known risks, and meet societal demands.                         |                    |
