Disciplinary Core Ideas

PS2.A	Forces and Motion		Aligned *PhD Science* Lessons
	Each force acts on one particular object and has both strength and a direction. An object at rest typically has multiple forces acting on it, but they add to give zero net force on the object. Forces that do not sum to zero can cause changes in the object's speed or direction of motion.		Level 3 M4 L10–18, 28–30
	The patterns of an object's motion in various situations can be observed and measured; when that past motion exhibits a regular pattern, future motion can be predicted from it.		Level 3 M4 L1–9, 28–30
PS2.B	**Types of Interactions**		**Aligned *PhD Science* Lessons**
	Objects in contact exert forces on each other.		Level 3 M4 L10–18, 28–30
	Electric and magnetic forces between a pair of objects do not require that the objects be in contact. The sizes of the forces in each situation depend on the properties of the objects and their distances apart and, for forces between two magnets, on their orientation relative to each other.		Level 3 M4 L19–30

LS3.B	**Variation of Traits**		**Aligned *PhD Science* Lessons**
	Different organisms vary in how they look and function because they have different inherited information.		Level 3 M3 L1–6, 14–18, 23–28
	The environment also affects the traits that an organism develops.		Level 3 M3 L9–13, 19–20

ETS1.C	**Optimizing the Design Solution**		**Aligned *PhD Science* Lessons**
	Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints.		Level 3 M4 L23–27

Disciplinary Core Ideas

PS3.A	Definitions of Energy		Aligned *PhD Science* Lessons
	The faster a given object is moving, the more energy it possesses.		Level 4 M2 L6–9, 12–16, 24–26
	Energy can be moved from place to place by moving objects or through sound, light, or electric currents.		Level 4 M2 L1–3, 10–11, 15–16, 24–26
PS3.B	**Conservation of Energy and Energy Transfer**		**Aligned *PhD Science* Lessons**
	Energy is present whenever there are moving objects, sound, light, or heat. When objects collide, energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced.		Level 4 M2 L1–5, 8–9, 24–26
	Light also transfers energy from place to place.		Level 4 M2 L10–11, 24–26
	Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy.		Level 4 M2 L1–3, 10–26
PS3.C	**Relationship Between Energy and Forces**		**Aligned *PhD Science* Lessons**
	When objects collide, the contact forces transfer energy so as to change the objects' motions.		Level 4 M2 L8–9, 24–26

	The expression "produce energy" typically refers to the conversion of stored energy into a desired form for practical use.		Level 4 M2 L12–14, 24–26

	Waves of the same type can differ in amplitude (height of the wave) and wavelength (spacing between wave peaks).		Level 4 M3 L7–14, 29–31

	An object can be seen when light reflected from its surface enters the eyes.		Level 4 M4 L1–17, 25–27
PS4.C	**Information Technologies and Instrumentation**		**Aligned *PhD Science* Lessons**

LS1.A	**Structure and Function**		**Aligned *PhD Science* Lessons**
	Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction.		Level 4 M3 L1–6, 20, 26–31

Disciplinary Core Ideas

PS1.A	**Structure and Properties of Matter**		**Aligned *PhD Science* Lessons**
	Matter of any type can be subdivided into particles that are too small to see, but even then the matter still exists and can be detected by other means. A model showing that gases are made from matter particles that are too small to see and are moving freely around in space can explain many observations, including the inflation and shape of a balloon and the effects of air on larger particles or objects.		Level 5 M1 L5–10, 23–26
	The amount (weight) of matter is conserved when it changes form, even in transitions in which it seems to vanish.		Level 5 M1 L9–17, 23–26
	Measurements of a variety of properties can be used to identify materials.		Level 5 M1 L1–4, 11–17, 23–26
PS1.B	**Chemical Reactions**		**Aligned *PhD Science* Lessons**
	When two or more different substances are mixed, a new substance with different properties may be formed.		Level 5 M1 L1–2, 15–26
	No matter what reaction or change in properties occurs, the total weight of the substances does not change.		Level 5 M1 L9–17, 23–26
PS2.B	**Types of Interactions**		**Aligned *PhD Science* Lessons**
	The gravitational force of Earth acting on an object near Earth's surface pulls that object toward the planet's center.		Level 5 M4 L3–4, 24–26
PS3.D	**Energy in Chemical Processes and Everyday Life**		**Aligned *PhD Science* Lessons**
	The energy released from food was once energy from the sun that was captured by plants in the chemical process that forms plant matter (from air and water).		Level 5 M2 L6–7, 15–19, 24–26

LS1.C	**Organization for Matter and Energy Flow in Organisms**		**Aligned *PhD Science* Lessons**
	Food provides animals with the materials they need for body repair and growth and the energy they need to maintain body warmth and for motion.		Level 5 M2 L8–9, 15–19, 24–26
	Plants acquire their material for growth chiefly from air and water.		Level 5 M2 L3–5, 24–26
LS2.A	**Interdependent Relationships in Ecosystems**		**Aligned *PhD Science* Lessons**
	The food of almost any kind of animal can be traced back to plants. Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants. Some organisms, such as fungi and bacteria, break down dead organisms (both plants or plants' parts and animals) and therefore operate as "decomposers." Decomposition eventually restores (recycles) some materials back to the soil. Organisms can survive only in environments in which their particular needs are met. A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. Newly introduced species can damage the balance of an ecosystem.		Level 5 M2 L1–2, 8–14, 20, 24–26
LS2.B	**Cycles of Matter and Energy Transfer in Ecosystems**		**Aligned *PhD Science* Lessons**
	Matter cycles between the air and soil and among plants, animals, and microbes as these organisms live and die. Organisms obtain gases, and water, from the environment and release waste matter (gas, liquid, or solid) back into the environment.		Level 5 M2 L6–7, 10–14, 24–26
ESS1.A	**The Universe and Its Stars**		**Aligned *PhD Science* Lessons**
	The sun is a star that appears larger and brighter than other stars because it is closer. Stars range greatly in their distance from Earth.		Level 5 M4 L18–19, 24–26
ESS1.B	**Earth and the Solar System**		**Aligned *PhD Science* Lessons**
	The orbits of Earth around the sun and of the moon around Earth, together with the rotation of Earth about an axis between its North and South poles, cause observable patterns. These include day and night; daily changes in the length and direction of shadows; and different positions of the sun, moon, and stars at different times of the day, month, and year. ESS2.A	**Earth Materials and Systems**		**Aligned *PhD Science* Lessons**
	Earth's major systems are the geosphere (solid and molten rock, soil, and sediments), the hydrosphere (water and ice), the atmosphere (air), and the biosphere (living things, including humans). These systems interact in multiple ways to affect Earth's surface materials and processes. The ocean supports a variety of ecosystems and organisms, shapes landforms, and influences climate. Winds and clouds in the atmosphere interact with the landforms to determine patterns of weather.		Level 5 M3 L1–13, 24–27
ESS2.C	**The Roles of Water in Earth's Surface Processes**		**Aligned *PhD Science* Lessons**
	Nearly all of Earth's available water is in the ocean. Most fresh water is in glaciers or underground; only a tiny fraction is in streams, lakes, wetlands, and the atmosphere.		Level 5 M3 L4–5, 24–27
ESS3.C	**Human Impacts on Earth Systems**		**Aligned *PhD Science* Lessons**
	Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean, air, and even outer space. But individuals and communities are doing things to help protect Earth's resources and environments.		Level 5 M3 L14–27
ETS1.A	**Defining and Delimiting Engineering Problems**		**Aligned *PhD Science* Lessons**
	Possible solutions to a problem are limited by available materials and resources (constraints). The success of a designed solution is determined by considering the desired features of a solution (criteria). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account.		Level 5 M2 L21–23
ETS1.B	**Developing Possible Solutions**		**Aligned *PhD Science* Lessons**
	Research on a problem should be carried out before beginning to design a solution. Testing a solution involves investigating how well it performs under a range of likely conditions.		Level 5 M3 L19–23
	At whatever stage, communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs.		Level 5 M2 L21–23 Level 5 M3 L19–23
	Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved.		Level 5 M1 L18–22
ETS1.C	**Optimizing the Design Solution**		**Aligned *PhD Science* Lessons**
	Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints.		Level 5 M1 L18–22
