

## ABOUT *EUREKA MATH*

Created by the nonprofit Great Minds, *Eureka Math* helps teachers deliver unparalleled math instruction that provides students with a deep understanding and fluency in math. Crafted by teachers and math scholars, the curriculum carefully sequences the mathematical progressions to maximize coherence from Prekindergarten through Precalculus—a principle tested and proven to be essential in students’ mastery of math.

Teachers and students using *Eureka Math* find the trademark “Aha!” moments in *Eureka Math* to be a source of joy and inspiration, lesson after lesson, year after year.

## ALIGNED

*Eureka Math* is the only curriculum found by EdReports.org to align fully with the Common Core State Standards for Mathematics for all grades, Kindergarten through Grade 8. Great Minds offers detailed analyses which demonstrate how each grade of *Eureka Math* aligns with specific state standards. Access these free alignment studies at [greatminds.org/state-studies](http://greatminds.org/state-studies).

## DATA

Schools and districts nationwide are experiencing student growth and impressive test scores after using *Eureka Math*. See their stories and data at [greatminds.org/data](http://greatminds.org/data).

## FULL SUITE OF RESOURCES

As a nonprofit, Great Minds offers the *Eureka Math* curriculum as PDF downloads for free, noncommercial use. Access the free PDFs at [greatminds.org/math/curriculum](http://greatminds.org/math/curriculum).

The teacher–writers who created the curriculum have also developed essential resources, available only from Great Minds, including the following:

- Printed material in English and Spanish
- Digital resources
- Professional development
- Classroom tools and manipulatives
- Teacher support materials
- Parent resources

# Connecticut Common Core State Standards: Mathematics

## Correlation to *Eureka Math*<sup>™</sup>

---

### ALGEBRA I

The majority of the Algebra I Connecticut Common Core State Standards: Mathematics are fully covered by the Algebra I *Eureka Math* curriculum. The areas where the Algebra I Connecticut Common Core State Standards: Mathematics and Algebra I *Eureka Math* do not align will require the use of *Eureka Math* content from other courses. A detailed analysis of alignment is provided in the table below.

### INDICATORS

-  Green indicates that the Connecticut standard is fully addressed in *Eureka Math*.
-  Yellow indicates that the Connecticut standard may not be completely addressed in *Eureka Math*.
-  Red indicates that the Connecticut standard is not addressed in *Eureka Math*.
-  Blue indicates there is a discrepancy between the grade level at which this standard is addressed in the Connecticut standards and in *Eureka Math*.

## Standards for Mathematical Practice

## Aligned Components of *Eureka Math*

### **1: Make sense of problems and persevere in solving them.**

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, “Does this make sense?” They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

Lessons in every module engage students in making sense of problems and persevering in solving them as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 1, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M2: Descriptive Statistics

Algebra I M3: Linear and Exponential Functions

Algebra I M4: Polynomial and Quadratic Expressions, Equations, and Functions

Algebra I M5: A Synthesis of Modeling with Equations and Functions

## Standards for Mathematical Practice

### **2: Reason abstractly and quantitatively.**

Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to *decontextualize*—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to *contextualize*, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

## Aligned Components of *Eureka Math*

Lessons in every module engage students in reasoning abstractly and quantitatively as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 2, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M2: Descriptive Statistics

Algebra I M3: Linear and Exponential Functions

Algebra I M4: Polynomial and Quadratic Expressions, Equations, and Functions

Algebra I M5: A Synthesis of Modeling with Equations and Functions

## Standards for Mathematical Practice

### **3: Construct viable arguments and critique the reasoning of others.**

Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

## Aligned Components of *Eureka Math*

Lessons in every module engage students in constructing viable arguments and critiquing the reasoning of others as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 3, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M2: Descriptive Statistics

## Standards for Mathematical Practice

## Aligned Components of *Eureka Math*

### **4: Model with mathematics.**

Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

Lessons in every module engage students in modeling with mathematics as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 4, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M2: Descriptive Statistics

Algebra I M3: Linear and Exponential Functions

Algebra I M4: Polynomial and Quadratic Expressions, Equations, and Functions

Algebra I M5: A Synthesis of Modeling with Equations and Functions

## Standards for Mathematical Practice

## Aligned Components of *Eureka Math*

### **5: Use appropriate tools strategically.**

Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

Lessons in every module engage students in using appropriate tools strategically as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 5, which is specifically addressed in the following modules:

Algebra I M2: Descriptive Statistics

Algebra I M4: Polynomial and Quadratic Expressions, Equations, and Functions

Algebra I M5: A Synthesis of Modeling with Equations and Functions

## Standards for Mathematical Practice

## Aligned Components of *Eureka Math*

### 6. Attend to precision.

Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

Lessons in every module engage students in attending to precision as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 6, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M2: Descriptive Statistics

Algebra I M4: Polynomial and Quadratic Expressions, Equations, and Functions

Algebra I M5: A Synthesis of Modeling with Equations and Functions

## Standards for Mathematical Practice

### **7: Look for and make use of structure.**

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see  $7 \times 8$  equals the well remembered  $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression  $x^2 + 9x + 14$ , older students can see the 14 as  $2 \times 7$  and the 9 as  $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see  $5 - 3(x - y)^2$  as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers  $x$  and  $y$ .

## Aligned Components of *Eureka Math*

Lessons in every module engage students in looking for and making use of structure as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 7, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M3: Linear and Exponential Functions

Algebra I M4: Polynomial and Quadratic Expressions, Equations, and Functions

## Standards for Mathematical Practice

## Aligned Components of *Eureka Math*

### **8: Look for and express regularity in repeated reasoning.**

Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation  $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding  $(x - 1)(x + 1)$ ,  $(x - 1)(x^2 + x + 1)$ , and  $(x - 1)(x^3 + x^2 + x + 1)$  might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

Lessons in every module engage students in looking for and expressing regularity in repeated reasoning as required by this standard. This practice standard is analogous to the CCSSM Standards for Mathematical Practice 8, which is specifically addressed in the following modules:

Algebra I M1: Relationships Between Quantities and Reasoning with Equations and Their Graphs

Algebra I M3: Linear and Exponential Functions

		<b>Cluster: Analyze functions using different representations.</b>	
		<b>F-IF.C.7</b> Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.	
		a. Graph linear and quadratic functions and show intercepts, maxima, and minima.	Algebra I M3 Lesson 11: The Graph of a Function Algebra I M3 Lesson 12: The Graph of the Equation $y = f(x)$ Algebra I M3 Lesson 16: Graphs Can Solve Equations Too Algebra I M3 Lesson 19: Four Interesting Transformations of Functions Algebra I M4 Lesson 8: Exploring the Symmetry in Graphs of Quadratic Functions Algebra I M4 Lesson 9: Graphing Quadratic Functions from Factored Form, $f(x) = a(x - m)(x - n)$ Algebra I M4 Lesson 16: Graphing Quadratic Equations from the Vertex Form, $y = a(x - h)^2 + k$ Algebra I M4 Lesson 17: Graphing Quadratic Functions from the Standard Form, $f(x) = ax^2 + bx + c$ Algebra I M4 Topic C: Function Transformations and Modeling

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.	<p>Algebra I M3 Topic C: Transformations of Functions</p> <p>Algebra I M4 Lesson 18: Graphing Cubic, Square Root, and Cube Root Functions</p> <p>Algebra I M4 Lesson 19: Translating Graphs of Functions</p> <p>Algebra I M4 Lesson 20: Stretching and Shrinking Graphs of Functions</p>
		e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.	<p>Algebra II M2 Lesson 8: Graphing the Sine and Cosine Functions</p> <p>Algebra II M2 Lesson 11: Transforming the Graph of the Sine Function</p> <p>Algebra II M2 Lesson 12: Ferris Wheels—Using Trigonometric Functions to Model Cyclical Behavior</p> <p>Algebra II M3 Lesson 16: Rational and Irrational Numbers</p> <p>Algebra II M3 Lesson 18: Graphs of Exponential Functions and Logarithmic Functions</p> <p>Algebra II M3 Lesson 20: Transformations of the Graphs of Logarithmic and Exponential Functions</p> <p>Algebra II M3 Lesson 33: The Million Dollar Problem</p> <p>Precalculus and Advanced Topics M4 Lesson 11: Revisiting the Graphs of the Trigonometric Functions</p>

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		<p><b>F-IF.C.8</b> Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.</p>	
		<p>a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.</p>	<p>Algebra I M4 Lesson 9: Graphing Quadratic Functions from Factored Form, <math>f(x) = a(x - m)(x - n)</math></p> <p>Algebra I M4 Topic B: Using Different Forms for Quadratic Functions</p> <p>Algebra I M4 Lesson 21: Transformations of the Quadratic Parent Function, <math>f(x) = x^2</math></p> <p>Algebra I M4 Lesson 23: Modeling with Quadratic Functions</p>
		<p>b. Use the properties of exponents to interpret expressions for exponential functions.</p>	<p>Algebra I M3 Lesson 5: The Power of Exponential Growth</p> <p>Algebra I M3 Lesson 6: Exponential Growth—U.S. Population and World Population</p> <p>Algebra I M3 Lesson 7: Exponential Decay</p> <p>Algebra I M3 Topic D: Using Functions and Graphs to Solve Problems</p> <p>Algebra II M3 Lesson 23: Bean Counting</p> <p>Algebra II M3 Lesson 27: Modeling with Exponential Functions</p>

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		<p><b>F-IF.C.9</b> Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions).</p>	Algebra I M4 Lesson 22: Comparing Quadratic, Square Root, and Cube Root Functions Represented in Different Ways
		<b>Cluster: Build a function that models a relationship between two quantities.</b>	
		<p><b>F-BF.A.1</b> Write a function that describes a relationship between two quantities.</p>	
		<p>a. Determine an explicit expression, a recursive process, or steps for calculation from a context.</p>	Algebra I M3: Linear and Exponential Functions Algebra I M5: A Synthesis of Modeling with Equations and Functions
		<p>b. Combine standard function types using arithmetic operations.</p>	Algebra II M2 Lesson 12: Ferris Wheels—Using Trigonometric Functions to Model Cyclical Behavior Algebra II M3 Lesson 28: Newton’s Law of Cooling, Revisited Algebra II M3 Lesson 30: Buying a Car Algebra II M3 Lesson 33: The Million Dollar Problem

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		<p><b>F-BF.A.2</b></p> <p>Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.</p>	<p>Algebra I M3 Topic A: Linear and Exponential Sequences</p> <p>Algebra II M3 Lesson 25: Geometric Sequences and Exponential Growth and Decay</p> <p>Algebra II M3 Lesson 26: Percent Rate of Change</p>
		<p><b>Cluster: Build new functions from existing functions.</b></p>	
		<p><b>F-BF.B.3</b></p> <p>Identify the effect on the graph of replacing <math>f(x)</math> by <math>f(x) + k</math>, <math>k f(x)</math>, <math>f(kx)</math>, and <math>f(x + k)</math> for specific values of <math>k</math> (both positive and negative); find the value of <math>k</math> given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology.</p>	<p>Algebra I M3 Topic C: Transformations of Functions</p> <p>Algebra I M4 Lesson 19: Translating Graphs of Functions</p> <p>Algebra I M4 Lesson 20: Stretching and Shrinking Graphs of Functions</p> <p>Algebra I M4 Lesson 21: Transformations of the Quadratic Parent Function, <math>f(x) = x^2</math></p>
		<p><b>F-BF.B.4</b></p> <p>Find inverse functions.</p>	
		<p>a. Solve an equation of the form <math>f(x) = c</math> for a simple function <math>f</math> that has an inverse and write an expression for the inverse.</p>	<p>Algebra II M3 Lesson 19: The Inverse Relationship Between Logarithmic and Exponential Functions</p>

	<b>Linear, Quadratic, and Exponential Models</b>	<b>Cluster: Construct and compare linear, quadratic, and exponential models and solve problems.</b>	
<b>F-LE.A.1</b> Distinguish between situations that can be modeled with linear functions and with exponential functions.			
a. Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals.		Algebra I M3 Lesson 14: Linear and Exponential Models—Comparing Growth Rates	
b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.		Algebra I M3 Lesson 5: The Power of Exponential Growth Algebra I M3 Lesson 6: Exponential Growth—U.S. Population and World Population Algebra I M5: A Synthesis of Modeling with Equations and Functions	

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.	Algebra I M3 Lesson 5: The Power of Exponential Growth Algebra I M3 Lesson 6: Exponential Growth—U.S. Population and World Population Algebra I M3 Lesson 7: Exponential Decay Algebra I M5: A Synthesis of Modeling with Equations and Functions
		<b>F-LE.A.2</b> Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).	Algebra I M3: Linear and Exponential Functions Algebra I M5: A Synthesis of Modeling with Equations and Functions Algebra II M3 Lesson 1: Integer Exponents

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		<p><b>F-LE.A.3</b> Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function.</p>	<p>Algebra I M3 Lesson 5: The Power of Exponential Growth</p> <p>Algebra I M3 Lesson 6: Exponential Growth—U.S. Population and World Population</p> <p>Algebra I M3 Lesson 14: Linear and Exponential Models—Comparing Growth Rates</p> <p>Algebra I M3 Lesson 21: Comparing Linear and Exponential Models Again</p>
		<p><b>Cluster: Interpret expressions for functions in terms of the situation they model.</b></p>	
		<p><b>F-LE.B.5</b> Interpret the parameters in a linear or exponential function in terms of a context.</p>	<p>Algebra I M3 Topic D: Using Functions and Graphs to Solve Problems</p>

Statistics and Probability	Interpreting Categorical and Quantitative Data	<b>Cluster: Summarize, represent, and interpret data on a single count or measurement variable.</b>	
		<b>S-ID.A.1</b> Represent data with plots on the real number line (dot plots, histograms, and box plots).	Algebra I M2: Descriptive Statistics
		<b>S-ID.A.2</b> Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.	Algebra I M2 Lesson 3: Estimating Centers and Interpreting the Mean as a Balance Point  Algebra I M2 Topic B: Describing Variability and Comparing Distributions
		<b>S-ID.A.3</b> Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).	Algebra I M2: Descriptive Statistics

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		<b>Cluster: Summarize, represent, and interpret data on two categorical and quantitative variables.</b>	
		<b>S-ID.B.5</b> Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.	Algebra I M2 Topic C: Categorical Data on Two Variables
		<b>S-ID.B.6</b> Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.	
		a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data.	Algebra I M2 Lessons 12–13: Relationships Between Two Numerical Variables  Algebra I M2 Lesson 19: Interpreting Correlation  Algebra I M2 Lesson 20: Analyzing Data Collected on Two Variables  Algebra I M5 Lesson 7: Modeling a Context from Data
		b. Informally assess the fit of a function by plotting and analyzing residuals.	Algebra I M2 Topic D: Numerical Data on Two Variables

Conceptual Category	Domain	Standards for Mathematical Content	Aligned Components of <i>Eureka Math</i>
		c. Fit a linear function for a scatter plot that suggests a linear association.	Algebra I M2 Lesson 18: Analyzing Residuals Algebra I M2 Lesson 19: Interpreting Correlation Algebra I M2 Lesson 20: Analyzing Data Collected on Two Variables Algebra I M5 Lesson 7: Modeling a Context from Data
		<b>Cluster: Interpret linear models.</b>	
		<b>S-ID.C.7</b> Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.	Algebra I M2 Lesson 14: Modeling Relationships with a Line
		<b>S-ID.C.8</b> Compute (using technology) and interpret the correlation coefficient of a linear fit.	Algebra I M2 Lesson 19: Interpreting Correlation Algebra I M2 Lesson 20: Analyzing Data Collected on Two Variables Algebra I M5 Lesson 7: Modeling a Context from Data
		<b>S-ID.C.9</b> Distinguish between correlation and causation.	Algebra I M2 Lesson 11: Conditional Relative Frequencies and Association Algebra I M2 Lesson 19: Interpreting Correlation Algebra I M2 Lesson 20: Analyzing Data Collected on Two Variables
