
Grade 8 | Tennessee Academic Standards for Mathematics Correlation to *Eureka Math*[®]

About *Eureka Math*

Created by Great Minds[®], a mission-driven Public Benefit Corporation, *Eureka Math*[®] helps teachers deliver unparalleled math instruction that provides students with a deep understanding and fluency in math. Crafted by teachers and math scholars, the curriculum carefully sequences the mathematical progressions to maximize coherence from Prekindergarten through Precalculus—a principle tested and proven to be essential in students’ mastery of math.

Teachers and students using *Eureka Math* find the trademark “Aha!” moments in *Eureka Math* to be a source of joy and inspiration, lesson after lesson, year after year.

Aligned

Great Minds offers detailed analyses that demonstrate how each grade of *Eureka Math* aligns with specific state standards. Access these free alignment studies at greatminds.org/state-studies.

Data

Schools and districts nationwide are experiencing student growth and impressive test scores after using *Eureka Math*. See their stories and data at greatminds.org/data.

Full Suite of Resources

Great Minds offers the *Eureka Math* curriculum as PDF downloads for free, noncommercial use. Access the free PDFs at greatminds.org/math/curriculum.

The teacher-writers who created the curriculum have also developed essential resources, available only from Great Minds, including the following:

- Printed material in English and Spanish
- Digital resources
- Professional development
- Classroom tools and manipulatives
- Teacher support materials
- Parent resources

Standards for Mathematical Practice

MP.1

Make sense of problems and persevere in solving them.

MP.2

Reason abstractly and quantitatively.

MP.3

Construct viable arguments and critique the reasoning of others.

MP.4

Model with mathematics.

MP.5

Use appropriate tools strategically.

MP.6

Attend to precision.

MP.7

Look for and make use of structure.

MP.8

Look for and express regularity in repeated reasoning.

Aligned Components of *Eureka Math*

Lessons in every module engage students in mathematical practices. These are designated in the Module Overview and labeled in lessons.

For example:

A STORY OF RATIOS

Lesson 1 **8•5**

- Let's make a prediction based on a value of x that is not listed in the table. How far did the stone drop in the first 3.5 seconds? What have we done in the past to figure something like this out?
 - We wrote a proportion using the known times and distances.

Allow students time to work with proportions. Encourage them to use more than one pair of data values to determine an answer. Some students might suggest they cannot use proportions for this work as they have just ascertained that there is not a constant rate of change. Acknowledge this. The work with proportions some students do will indeed confirm this.

- Sample student work:

Let x be the distance, in feet, the stone drops in 3.5 seconds.

$$\frac{16}{1} = \frac{x}{3.5}$$

$$x = 56$$

$$\frac{64}{2} = \frac{x}{3.5}$$

$$2x = 224$$

$$x = 112$$

$$\frac{144}{3} = \frac{x}{3.5}$$

$$3x = 504$$

$$x = 168$$

MP.3

- Is it reasonable that the stone would drop 56 feet in 3.5 seconds? Explain.
 - No, it is not reasonable. Our data shows that after 2 seconds, the stone has already dropped 64 feet. Therefore, it is impossible that it could have only dropped 56 feet in 3.5 seconds.
- What about 112 feet in 3.5 seconds? How reasonable is that answer? Explain.
 - The answer of 112 feet in 3.5 seconds is not reasonable either. The data shows that the stone dropped 144 feet in 3 seconds.
- What about 168 feet in 3.5 seconds? What do you think about that answer? Explain.
 - That answer is the most likely because at least it is greater than the recorded 144 feet in 3 seconds.
- What makes you think that the work done with a third proportion will give us a correct answer when the first two did not? Can we rely on this method for determining an answer?
 - This does not seem to be a reliable method. If we had only done one computation and not evaluated the reasonableness of our answer, we would have been wrong.

The Number System

8.NS.A Know that there are numbers that are not rational, and approximate them by rational numbers.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.NS.A.1</p> <p>Know that real numbers that are not rational are called irrational (e.g., π, $\sqrt{2}$, etc.). Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually or terminates, and convert a decimal expansion which repeats eventually or terminates into a rational number.</p>	<p>G8 M7 Topic B: Decimal Expansions of Numbers</p>
<p>8.NS.A.2</p> <p>Use rational approximations of irrational numbers to compare the size of irrational numbers by locating them approximately on a number line diagram. Estimate the value of irrational expressions (such as π^2).</p>	<p>G8 M7 Lesson 1: The Pythagorean Theorem</p> <p>G8 M7 Lesson 2: Square Roots</p> <p>G8 M7 Lesson 3: Existence and Uniqueness of Square Roots and Cube Roots</p> <p>G8 M7 Lesson 4: Simplifying Square Roots</p> <p>G8 M7 Lesson 11: The Decimal Expansion of Some Irrational Numbers</p> <p>G8 M7 Lesson 13: Comparing Irrational Numbers</p> <p>G8 M7 Lesson 14: Decimal Expansion of π</p>

Expressions and Equations**8.EE.A Work with radicals and integer exponents.**

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.EE.A.1</p> <p>Know and apply the properties of integer exponents to generate equivalent numerical expressions.</p>	<p>G8 M1 Topic A: Exponential Notation and Properties of Integer Exponents</p>
<p>8.EE.A.2</p> <p>Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$, where p is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes.</p>	<p>G8 M7 Lesson 2: Square Roots</p> <p>G8 M7 Lesson 5: Solving Equations with Radicals</p> <p>G8 M7 Lesson 10: Converting Repeating Decimals to Fractions</p>
<p>8.EE.A.3</p> <p>Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities and to express how many times as much one is than the other.</p>	<p>G8 M1 Lesson 7: Magnitude</p> <p>G8 M1 Lesson 8: Estimating Quantities</p>
<p>8.EE.A.4</p> <p>Using technology, solve real-world problems with numbers expressed in decimal and scientific notation. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading).</p>	<p>G8 M1 Lesson 9: Scientific Notation</p> <p>G8 M1 Lesson 10: Operations with Numbers in Scientific Notation</p> <p>G8 M1 Lesson 11: Efficacy of Scientific Notation</p> <p>G8 M1 Lesson 12: Choice of Unit</p> <p>G8 M1 Lesson 13: Comparison of Numbers Written in Scientific Notation and Interpreting Scientific Notation Using Technology</p>

Expressions and Equations

8.EE.B Understand the connections between proportional relationships, lines, and linear equations.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.EE.B.5</p> <p>Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways.</p>	<p>G8 M4 Topic B: Linear Equations in Two Variables and Their Graphs</p> <p>G8 M4 Lesson 15: The Slope of a Non-Vertical Line</p> <p>G8 M4 Lesson 22: Constant Rates Revisited</p> <p>G8 M4 Lesson 24: Introduction to Simultaneous Equations</p>
<p>8.EE.B.6</p> <p>Use similar triangles to explain why the slope m is the same between any two distinct points on a non-vertical line in the coordinate plane; know and apply the equation $y = mx$ for a line through the origin and the equation $y = mx + b$ for a line intercepting the vertical axis at b.</p>	<p>G8 M4 Lesson 16: The Computation of the Slope of a Non-Vertical Line</p> <p>G8 M4 Lesson 17: The Line Joining Two Distinct Points of the Graph $y = mx + b$ Has Slope m</p> <p>G8 M4 Lesson 18: There Is Only One Line Passing Through a Given Point with a Given Slope</p> <p>G8 M4 Lesson 19: The Graph of a Linear Equation in Two Variables Is a Line</p> <p>G8 M4 Lesson 20: Every Line Is a Graph of a Linear Equation</p> <p>G8 M4 Lesson 21: Some Facts About Graphs of a Linear Equation in Two Variables</p> <p>G8 M4 Lesson 22: Constant Rates Revisited</p> <p>G8 M4 Lesson 23: The Defining Equation of a Line</p>

Expressions and Equations

8.EE.C Analyze and solve linear equations, linear inequalities, and systems of two linear equations.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.EE.C.7</p> <p>Solve linear equations in one variable.</p>	<p><i>This standard is fully addressed by the lessons aligned to its subsections.</i></p>

Tennessee Academic Standards for Mathematics

Aligned Components of *Eureka Math*

<p>8.EE.C.7a</p> <p>Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers).</p>	<p>G8 M4 Lesson 3: Linear Equations in x</p> <p>G8 M4 Lesson 4: Solving a Linear Equation</p> <p>G8 M4 Lesson 6: Solutions of a Linear Equation</p> <p>G8 M4 Lesson 7: Classification of Solutions</p>
<p>8.EE.C.7b</p> <p>Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and combining like terms.</p>	<p>G8 M4 Lesson 4: Solving a Linear Equation</p> <p>G8 M4 Lesson 5: Writing and Solving Linear Equations</p> <p>G8 M4 Lesson 6: Solutions of a Linear Equation</p> <p>G8 M4 Lesson 7: Classification of Solutions</p> <p>G8 M4 Lesson 8: Linear Equations in Disguise</p> <p>G8 M4 Lesson 9: An Application of Linear Equations</p>
<p>8.EE.C.8</p> <p>Analyze and solve systems of two linear equations graphically.</p>	<p><i>This standard is fully addressed by the lessons aligned to its subsections.</i></p>

**Tennessee Academic Standards
for Mathematics**

Aligned Components of *Eureka Math*

<p>8.EE.C.8a</p> <p>Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.</p>	<p>G8 M4 Lesson 24: Introduction to Simultaneous Equations</p> <p>G8 M4 Lesson 25: Geometric Interpretation of the Solutions of a Linear System</p> <p>G8 M4 Lesson 26: Characterization of Parallel Lines</p>
<p>8.EE.C.8b</p> <p>Estimate solutions by graphing a system of two linear equations in two variables. Identify solutions by inspecting graphs.</p>	<p>G8 M4 Lesson 24: Introduction to Simultaneous Equations</p> <p>G8 M4 Lesson 25: Geometric Interpretation of the Solutions of a Linear System</p> <p>G8 M4 Lesson 26: Characterization of Parallel Lines</p>
<p>8.EE.C.9</p> <p>By graphing on the coordinate plane or by analyzing a given graph, determine the solution set of a linear inequality in one or two variables.</p>	<p>Algebra I M1 Lesson 21: Solution Sets to Inequalities with Two Variables</p> <p>Algebra I M1 Lesson 22: Solution Sets to Simultaneous Equations</p> <p>Algebra I M1 Lesson 24: Applications of Systems of Equations and Inequalities</p>

Functions

8.F.A Define, evaluate, and compare functions.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.F.A.1</p> <p>Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.</p>	<p>G8 M5 Lesson 1: The Concept of a Function</p> <p>G8 M5 Lesson 2: Formal Definition of a Function</p> <p>G8 M5 Lesson 4: More Examples of Functions</p> <p>G8 M5 Lesson 5: Graphs of Functions and Equations</p> <p>G8 M5 Lesson 6: Graphs of Linear Functions and Rate of Change</p> <p>G8 M5 Lesson 8: Graphs of Simple Nonlinear Functions</p>
<p>8.F.A.2</p> <p>Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions).</p>	<p>G8 M5 Lesson 7: Comparing Linear Functions and Graphs</p>
<p>8.F.A.3</p> <p>Know and interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear.</p>	<p>G8 M5 Lesson 3: Linear Functions and Proportionality</p> <p>G8 M5 Lesson 5: Graphs of Functions and Equations</p> <p>G8 M5 Lesson 6: Graphs of Linear Functions and Rate of Change</p> <p>G8 M5 Lesson 7: Comparing Linear Functions and Graphs</p> <p>G8 M5 Lesson 8: Graphs of Simple Nonlinear Functions</p>

Functions

8.F.B Use functions to model relationships between quantities.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.F.B.4</p> <p>Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two (x, y) values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models and in terms of its graph or a table of values.</p>	<p>G8 M6 Lesson 1: Modeling Linear Relationships</p> <p>G8 M6 Lesson 2: Interpreting Rate of Change and Initial Value</p> <p>G8 M6 Lesson 3: Representations of a Line</p>
<p>8.F.B.5</p> <p>Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.</p>	<p>G8 M6 Lesson 2: Interpreting Rate of Change and Initial Value</p> <p>G8 M6 Lesson 3: Representations of a Line</p> <p>G8 M6 Lesson 4: Increasing and Decreasing Functions</p> <p>G8 M6 Lesson 5: Increasing and Decreasing Functions</p>

Geometry

8.G.A Understand and describe the effects of transformations on two-dimensional figures and use informal arguments to establish facts about angles.

Tennessee Academic Standards for Mathematics

Aligned Components of *Eureka Math*

<p>8.G.A.1</p> <p>Describe the effect of translations, rotations, reflections, and dilations on two-dimensional figures using coordinates.</p>	<p><i>This standard is fully addressed by the lessons aligned to its subsections.</i></p>
<p>8.G.A.1a</p> <p>Verify informally that lines are taken to lines, and determine when line segments are taken to line segments of the same length.</p>	<p>G8 M2 Topic A: Definitions and Properties of the Basic Rigid Motions</p>
<p>8.G.A.1b</p> <p>Verify informally that angles are taken to angles of the same measure.</p>	<p>G8 M2 Topic A: Definitions and Properties of the Basic Rigid Motions</p>
<p>8.G.A.1c</p> <p>Verify informally that parallel lines are taken to parallel lines.</p>	<p>G8 M2 Topic A: Definitions and Properties of the Basic Rigid Motions</p>
<p>8.G.A.1d</p> <p>Make connections between dilations and scale factors.</p>	<p>G8 M3 Topic A: Dilation G8 M3 Lesson 8: Similarity</p>

Tennessee Academic Standards for Mathematics

Aligned Components of *Eureka Math*

<p>8.G.A.2</p> <p>Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles.</p>	<p>G8 M2 Lesson 12: Angles Associated with Parallel Lines</p> <p>G8 M2 Lesson 13: Angle Sum of a Triangle</p> <p>G8 M2 Lesson 14: More on the Angles of a Triangle</p> <p>G8 M3 Lesson 10: Informal Proof of AA Criterion for Similarity</p> <p>G8 M3 Lesson 11: More About Similar Triangles</p> <p>G8 M3 Lesson 12: Modeling Using Similarity</p>
---	---

Geometry

8.G.B Understand and apply the Pythagorean Theorem.

Tennessee Academic Standards for Mathematics

Aligned Components of *Eureka Math*

<p>8.G.B.3</p> <p>Explain a model of the Pythagorean Theorem and its converse.</p>	<p>G8 M2 Lesson 15: Informal Proof of the Pythagorean Theorem</p> <p>G8 M3 Topic C: The Pythagorean Theorem</p> <p>G8 M7 Lesson 15: Pythagorean Theorem, Revisited</p> <p>G8 M7 Lesson 16: Converse of the Pythagorean Theorem</p>
<p>8.G.B.4</p> <p>Know and apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.</p>	<p>G8 M2 Topic D: The Pythagorean Theorem</p> <p>G8 M3 Topic C: The Pythagorean Theorem</p> <p>G8 M7 Lesson 1: The Pythagorean Theorem</p> <p>G8 M7 Lesson 4: Simplifying Square Roots</p> <p>G8 M7 Lesson 5: Solving Equations with Radicals</p> <p>G8 M7 Lesson 17: Distance on the Coordinate Plane</p> <p>G8 M7 Lesson 18: Applications of the Pythagorean Theorem</p> <p>G8 M7 Lesson 19: Cones and Spheres</p> <p>G8 M7 Lesson 23: Nonlinear Motion</p>

**Tennessee Academic Standards
for Mathematics**

Aligned Components of *Eureka Math*

<p>8.G.B.5</p> <p>Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.</p>	<p>G8 M2 Lesson 16: Applications of the Pythagorean Theorem</p> <p>G8 M7 Lesson 17: Distance on the Coordinate Plane</p>
--	--

Geometry

8.G.C Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres.

**Tennessee Academic Standards
for Mathematics**

Aligned Components of *Eureka Math*

<p>8.G.C.6</p> <p>Apply the formulas for the volumes of cones, cylinders, and spheres to solve real-world and mathematical problems.</p>	<p>G8 M5 Topic B: Volume</p> <p>G8 M7 Lesson 19: Cones and Spheres</p> <p>G8 M7 Lesson 20: Truncated Cones</p> <p>G8 M7 Lesson 21: Volume of Composite Solids</p>
---	---

Statistics and Probability

8.SP.A Investigate patterns of association in bivariate data.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.SP.A.1</p> <p>Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.</p>	<p>G8 M6 Lesson 6: Scatter Plots</p> <p>G8 M6 Lesson 7: Patterns in Scatter Plots</p> <p>G8 M6 Lesson 11: Using Linear Models in a Data Context</p> <p>G8 M6 Lesson 12: Nonlinear Models in a Data Context</p>
<p>8.SP.A.2</p> <p>Know that straight lines are widely used to model linear relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line and informally assess the model fit by judging the closeness of the data points to the line.</p>	<p>G8 M6 Lesson 8: Informally Fitting a Line</p> <p>G8 M6 Lesson 9: Determining the Equation of a Line Fit to Data</p> <p>G8 M6 Lesson 11: Using Linear Models in a Data Context</p> <p>G8 M6 Lesson 12: Nonlinear Models in a Data Context</p>
<p>8.SP.A.3</p> <p>Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercepts.</p>	<p>G8 M6 Lesson 9: Determining the Equation of a Line Fit to Data</p> <p>G8 M6 Lesson 10: Linear Models</p> <p>G8 M6 Lesson 11: Using Linear Models in a Data Context</p> <p>G8 M6 Lesson 12: Nonlinear Models in a Data Context</p>

Statistics and Probability

8.SP.B Investigate chance processes and develop, use, and evaluate probability models.

Tennessee Academic Standards for Mathematics	Aligned Components of <i>Eureka Math</i>
<p>8.SP.B.4</p> <p>Find probabilities of and represent sample spaces for compound events using organized lists, tables, tree diagrams, and simulation.</p>	<p><i>This standard is fully addressed by the lessons aligned to its subsections.</i></p>
<p>8.SP.B.4a</p> <p>Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.</p>	<p>G7 M5 Lesson 6: Using Tree Diagrams to Represent a Sample Space and to Calculate Probabilities</p> <p>G7 M5 Lesson 7: Calculating Probabilities of Compound Events</p> <p>G7 M5 Lesson 10: Conducting a Simulation to Estimate the Probability of an Event</p> <p>G7 M5 Lesson 11: Conducting a Simulation to Estimate the Probability of an Event</p>
<p>8.SP.B.4b</p> <p>Represent sample spaces for compound events using methods such as organized lists, tables, and tree diagrams. For an event described in everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event.</p>	<p>G7 M5 Lesson 6: Using Tree Diagrams to Represent a Sample Space and to Calculate Probabilities</p> <p>G7 M5 Lesson 7: Calculating Probabilities of Compound Events</p>
